

# FavQs

---

## Provides:

This API provides access to a wealth of quotes and their respective owners.

## Key Provisioning:

**Pain factor** (*0=eazpz...5=nightmare*): 

- You must register an account with FavQs
- After registering said account, you are able to generate (multiple) API keys

## Quotas:

You shall not:

- Display more than 30 FavQs quotes per page in your application or use an unreasonable amount of bandwidth.

---

## The Good:

- The Quote of the Day requires no API key!
- The API seems very similar to NASA's, meaning it's relative difficulty should be small.
- Unlimited API keys per user can be generated and they can be active/inactive!
- Many example API calls, and you can select which type of information you're seeking

## The Bad:

- One needs to make an account to obtain API key making access.
- API key has to be placed into the headers

## The Ugly:

-
